Integrated Public Financial Management System

HOW WE LAID THE FOUNDATIONS OF TECH-DRIVEN BUDGETING

The government envisions an integrated financial management information system (IFMIS) to make financial reporting more efficient, transparent, and accountable. Since 2010, the government rolled out various tech-driven tools to automate processes and harmonized account codes structure, financial reports, and cash management.

More important is the capacity of the people who will operate the system. Thus, the government introduced the PFM Certificate Program to improve the capacity of PFM professionals throughout the bureaucracy.

Unified Accounts Code Structure (UACS)

As the IFMIS's backbone, the UACS provides a harmonized classification system for budgetary, treasury, and accounting processes across the government.

### Treasury Single Account (TSA)

The TSA is a set of banking arrangements managed by the DOF-Bureau of the Treasury (BTr) that gives the government a consolidated view of its cash resources. Through the TSA, it is as if the government transacts through a single bank account.

Budget Treasury and Management System (BTMS)

The BTMS will serve as an integrated system for budgetary, treasury, management, accounting, and reporting processes of DBM and DOF-BTr.

Unified Reporting System (URS)

Like the OSBPS, the URS facilitates the online submission of Budget Execution Plans and Targets and Budget and Financial Accountability Reports (BFARs).

Enhanced Government Manpower Information System (GMIS)

The Enhanced GMIS will serve as a comprehensive and unified system to manage human resource information of agencies. It aims to expand and integrate manpower and payroll management.

### Budget Cycle Analytics (BCA)

BCA enables cross comparison of UACS-based budgetary data, targets and accomplishments to support analysis and decision-making.

Online Submission of Budget Proposals System (OSBPS)

Through the online and real-time submission of budget data, the OSBPS reduces paperwork in budget preparation.

*Other components, such as agency modules to the BTMS are for development.
